

The private hospital network manages patients, doctors, wards and clinical appointments. Each patient is registered with a unique fiscal code, a full name and a date of birth. Doctors are specialists in one of six departments (Cardiology, Neurology, Orthopedics, Pediatrics, Dermatology, Gynecology); each department maps to a dedicated ward (Reparto A to F). An appointment links a patient, a doctor and a ward, and records the scheduled date and time.

During an appointment one or more clinical treatments may be performed (for example a specialist visit, an ultrasound, a blood test or an ECG). Every treatment is billed: the invoice records the appointment, the amount and the issue date. Treatments may require medications: a treatment can require several medications and a medication can be prescribed to several treatments, so prescriptions connect treatments to medications with a dosage instruction.

For research purposes the operational notes provide the department-to-ward mapping and the invoicing rule (treatment fee plus 15% co-payment). These notes are part of the document set given to the population system.
